EDUCATION

New York University, Courant Institute of Mathematical Sciences, Center for Data Science — New York , NY
Master in Data Science | GRE Quant: 170 — Expected May 2028

- **Upcoming Courses:** Machine Learning, Deep Learning, NLP, Causal Inference, Big Data, Programming for Data Science

Shanghai University of Finance and Economics (SUFE) — Shanghai, China
Bachelor of Management in International Accounting, minor in Economic Statistics — June 2026

- **Relevant Courses:** Probability and Statistics, Financial Regression Analysis, Applied Multivariate Statistical Analysis, Financial Risk Management, Computer Applications in Economic Management, Large Language Models in Economic Management
- **Exchange:** CUHK, Fall 2025, Coursework in Time Series Analysis and Financial Management;
  UC Berkeley, Fall 2024, GPA: 3.9/4.0 in CS61B Data Structures, CS61A and Math 54 ODE

RELEVANT EXPERIENCE

Boston Consulting Group (BCG) — Shanghai / Hong Kong
Part-Time Assistant — Jan 2025 – Dec 2025

- **AI Data Pipeline & Governance:** Built an enterprise data sanitization pipeline across 3 manufacturing data domains using Python, MD5 encryption, numerical scaling, and automated mapping generation; Developed AI-ready preprocessing workflows by integrating configurable YAML pipelines and NLP-based text safety modules (spaCy, Detoxify) to secure data governance.
- **Market Analytics:** Built an industrial pump market database integrating 20+ procurement projects and customer profiles**;** analyzed demand patterns across 4 application sectors to identify growth opportunities and support market entry strategy.

Xiaohongshu (RedNote) — Shanghai
Data Analyst Intern — May 2025 – Jun 2025

- **Growth Analytics:** Analyzed performance using SQL and business metrics (DGMV, GMV attainment, merchant activity); monitored weekly growth trends with daily GMV reaching 21.4M RMB and YoY growth of 34% to identify key growth drivers.
- **Merchant Analytics:** Conducted performance diagnostics for 100K+ merchants by analyzing sales fluctuations, traffic performance, and operational metrics; identified merchant-level growth opportunities and supported category operation strategies.
- **Product Analytics:** Evaluated category and product-level performance across food, beverage, and wellness segments; tracked 1,900+ newly onboarded merchants and analyzed high-growth categories to support seasonal product selection.

Industrial Securities Co., Ltd. — Shanghai
Industry Research Intern — Jan 2024 – Apr 2024

- **Financial Data Infrastructure:** Built and maintained 7+ structured financial databases covering industry cycles, policy events, SOE governance, institutional investors, and equity financing activities using Wind, iFinD, and Excel-based workflows.
- **Quantitative Market Analysis:** Classified production cycle stages for 31 primary and 134 secondary A-share industries and developed structured datasets to analyze sector trends and macroeconomic signals in last 20 years.

RESEARCH AND PROJECTS

Uplift Modeling for E-commerce Coupon Optimization | Undergraduate Research Project — Apr 2026

- **Uplift Modeling**: Developed a causal machine learning framework using logistic regression and causal forest on 12.7M+ randomized user interactions to estimate heterogeneous treatment effects and optimize personalized coupon targeting.
- **Market Optimization:** Ranked users by predicted uplift scores and identified high-value segments with 0.74% realized incremental conversion uplift, demonstrating improved targeting efficiency over traditional conversion-based approaches.

Airbnb Pricing Prediction and Market Analytics — June 2026

- **Recommendation System**: Developed a recommendation framework using NYC data with 36K+ listings and 1M+ reviews; geospatial features including subway, university, downtown, and community accessibility to evaluate housing convenience.
- **Scoring & Visualization:** Built a recommendation score integrating transit accessibility, review quality, daily-life convenience, and community factors; deployed interactive geographic visualizations to compare neighborhoods and listing characteristics.

Amazon Delivery Efficiency Optimization — June 2025

- **Machine Learning Modeling**: Processed 8.6K+ delivery records by constructing delivery time, distance, and etc.; trained Linear Regression, Random Forest, and Gradient Boosting models to predict delivery efficiency, achieving R^2=0.25 and MAE=0.10.
- **Operational Optimization:** Identified vehicle condition, weather, and multi-order delivery as key efficiency drivers through feature importance analysis; simulated operational improvements and increased predicted efficiency score by 5.2%.

ADDITIONAL INFORMATION

- **Languages:** English (Professional), Mandarin (Native)
- **Programming:** Python, SQL, Java, R; ML/Data: sk-learn, pandas, NumPy, A/B Test, Causal Inference
- **Interests:** Volleyball & Soccer Team Player (scored winning goal to final); Media Creator (100K+ views); Piano (Grade 5)
- **Leadership:** International Program Coordinator, Global SUFE Summer School; supported 60+ international students from 17 countries by organizing accommodation, campus activities, and cross-cultural communication throughout a three-week program.
